

# Detailed Contents

## 1 Introduction: Themes in the Study of Life 1

### OVERVIEW **Inquiring About Life 1**

#### **CONCEPT 1.1 The themes of this book make connections across different areas of biology 2**

- Theme: New Properties Emerge at Each Level in the Biological Hierarchy 3
- Theme: Organisms Interact with Other Organisms and the Physical Environment 6
- Theme: Life Requires Energy Transfer and Transformation 6
- Theme: Structure and Function Are Correlated at All Levels of Biological Organization 7
- Theme: The Cell Is an Organism's Basic Unit of Structure and Function 8
- Theme: The Continuity of Life Is Based on Heritable Information in the Form of DNA 8
- Theme: Feedback Mechanisms Regulate Biological Systems 10
- Evolution, the Overarching Theme of Biology 11

#### **CONCEPT 1.2 The Core Theme: Evolution accounts for the unity and diversity of life 11**

- Classifying the Diversity of Life 12
- Charles Darwin and the Theory of Natural Selection 14
- The Tree of Life 16

#### **CONCEPT 1.3 In studying nature, scientists make observations and then form and test hypotheses 18**

- Making Observations 18
- Forming and Testing Hypotheses 19
- The Flexibility of the Scientific Method 20
- A Case Study in Scientific Inquiry: Investigating Mimicry in Snake Populations 20
- Theories in Science 23

#### **CONCEPT 1.4 Science benefits from a cooperative approach and diverse viewpoints 23**

- Building on the Work of Others 23
- Science, Technology, and Society 24
- The Value of Diverse Viewpoints in Science 25

### UNIT

## 1 The Chemistry of Life 28

Interview: Susan Solomon

## 2 The Chemical Context of Life 30

### OVERVIEW **A Chemical Connection to Biology 30**

#### **CONCEPT 2.1 Matter consists of chemical elements in pure form and in combinations called compounds 31**

- Elements and Compounds 31
- The Elements of Life 32
- Case Study:* Evolution of Tolerance to Toxic Elements 32

#### **CONCEPT 2.2 An element's properties depend on the structure of its atoms 33**

- Subatomic Particles 33
- Atomic Number and Atomic Mass 33
- Isotopes 34
- The Energy Levels of Electrons 35
- Electron Distribution and Chemical Properties 36
- Electron Orbitals 37

#### **CONCEPT 2.3 The formation and function of molecules depend on chemical bonding between atoms 38**

- Covalent Bonds 38
- Ionic Bonds 39
- Weak Chemical Bonds 40
- Molecular Shape and Function 41

#### **CONCEPT 2.4 Chemical reactions make and break chemical bonds 42**

## 3 Water and Life 46

### OVERVIEW **The Molecule That Supports All of Life 46**

#### **CONCEPT 3.1 Polar covalent bonds in water molecules result in hydrogen bonding 46**

#### **CONCEPT 3.2 Four emergent properties of water contribute to Earth's suitability for life 47**

- Cohesion of Water Molecules 47
- Moderation of Temperature by Water 48
- Floating of Ice on Liquid Water 49
- Water: The Solvent of Life 50
- Possible Evolution of Life on Other Planets with Water 52

#### **CONCEPT 3.3 Acidic and basic conditions affect living organisms 52**

- Acids and Bases 53
- The pH Scale 53
- Buffers 54
- Acidification: A Threat to Water Quality 55

## 4 Carbon and the Molecular Diversity of Life 58

### OVERVIEW **Carbon: The Backbone of Life 58**

#### **CONCEPT 4.1 Organic chemistry is the study of carbon compounds 58**

- Organic Molecules and the Origin of Life on Earth 59

#### **CONCEPT 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms 60**

- The Formation of Bonds with Carbon 60
- Molecular Diversity Arising from Carbon Skeleton Variation 61

#### **CONCEPT 4.3 A few chemical groups are key to the functioning of biological molecules 63**

- The Chemical Groups Most Important in the Processes of Life 63
- ATP: An Important Source of Energy for Cellular Processes 66
- The Chemical Elements of Life: *A Review* 66

## 5

## The Structure and Function of Large Biological Molecules 68

**OVERVIEW** The Molecules of Life 68

**CONCEPT 5.1** Macromolecules are polymers, built from monomers 68

The Synthesis and Breakdown of Polymers 68  
The Diversity of Polymers 69

**CONCEPT 5.2** Carbohydrates serve as fuel and building material 69

Sugars 69  
Polysaccharides 70

**CONCEPT 5.3** Lipids are a diverse group of hydrophobic molecules 74

Fats 74  
Phospholipids 76  
Steroids 77

**CONCEPT 5.4** Proteins include a diversity of structures, resulting in a wide range of functions 77

Polypeptides 77  
Protein Structure and Function 80

**CONCEPT 5.5** Nucleic acids store, transmit, and help express hereditary information 86

The Roles of Nucleic Acids 86  
The Components of Nucleic Acids 87  
Nucleotide Polymers 88  
The Structures of DNA and RNA Molecules 88  
DNA and Proteins as Tape Measures of Evolution 89  
The Theme of Emergent Properties in the Chemistry of Life: *A Review* 89

UNIT

## 2

## The Cell 92

Interview: Bonnie L. Bassler

## 6

## A Tour of the Cell 94

**OVERVIEW** The Fundamental Units of Life 94

**CONCEPT 6.1** Biologists use microscopes and the tools of biochemistry to study cells 94

Microscopy 94  
Cell Fractionation 97

**CONCEPT 6.2** Eukaryotic cells have internal membranes that compartmentalize their functions 98

Comparing Prokaryotic and Eukaryotic Cells 98  
A Panoramic View of the Eukaryotic Cell 99

**CONCEPT 6.3** The eukaryotic cell's genetic instructions are housed in the nucleus and carried out by the ribosomes 102

The Nucleus: Information Central 102  
Ribosomes: Protein Factories 102

**CONCEPT 6.4** The endomembrane system regulates protein traffic and performs metabolic functions in the cell 104

The Endoplasmic Reticulum: Biosynthetic Factory 104  
The Golgi Apparatus: Shipping and Receiving Center 105  
Lysosomes: Digestive Compartments 106  
Vacuoles: Diverse Maintenance Compartments 107  
The Endomembrane System: *A Review* 108

**CONCEPT 6.5** Mitochondria and chloroplasts change energy from one form to another 109

The Evolutionary Origins of Mitochondria and Chloroplasts 109  
Mitochondria: Chemical Energy Conversion 110  
Chloroplasts: Capture of Light Energy 110  
Peroxisomes: Oxidation 111

**CONCEPT 6.6** The cytoskeleton is a network of fibers that organizes structures and activities in the cell 112

Roles of the Cytoskeleton: Support and Motility 112  
Components of the Cytoskeleton 113

**CONCEPT 6.7** Extracellular components and connections between cells help coordinate cellular activities 118

Cell Walls of Plants 118  
The Extracellular Matrix (ECM) of Animal Cells 119  
Cell Junctions 120  
The Cell: A Living Unit Greater Than the Sum of Its Parts 122

## 7

## Membrane Structure and Function 125

**OVERVIEW** Life at the Edge 125

**CONCEPT 7.1** Cellular membranes are fluid mosaics of lipids and proteins 125

Membrane Models: *Scientific Inquiry* 125  
The Fluidity of Membranes 127  
Evolution of Differences in Membrane Lipid Composition 128  
Membrane Proteins and Their Functions 129  
The Role of Membrane Carbohydrates in Cell-Cell Recognition 130  
Synthesis and Sidedness of Membranes 130

**CONCEPT 7.2** Membrane structure results in selective permeability 131

The Permeability of the Lipid Bilayer 131  
Transport Proteins 131

**CONCEPT 7.3** Passive transport is diffusion of a substance across a membrane with no energy investment 132

Effects of Osmosis on Water Balance 133  
Facilitated Diffusion: Passive Transport Aided by Proteins 134

**CONCEPT 7.4** Active transport uses energy to move solutes against their gradients 135

The Need for Energy in Active Transport 135  
How Ion Pumps Maintain Membrane Potential 136  
Cotransport: Coupled Transport by a Membrane Protein 137

**CONCEPT 7.5** Bulk transport across the plasma membrane occurs by exocytosis and endocytosis 138

Exocytosis 138  
Endocytosis 138

## 8 An Introduction to Metabolism 142

### OVERVIEW The Energy of Life 142

#### CONCEPT 8.1 An organism's metabolism transforms matter and energy, subject to the laws of thermodynamics 142

- Organization of the Chemistry of Life into Metabolic Pathways 142
- Forms of Energy 143
- The Laws of Energy Transformation 144

#### CONCEPT 8.2 The free-energy change of a reaction tells us whether or not the reaction occurs spontaneously 146

- Free-Energy Change,  $\Delta G$  146
- Free Energy, Stability, and Equilibrium 146
- Free Energy and Metabolism 147

#### CONCEPT 8.3 ATP powers cellular work by coupling exergonic reactions to endergonic reactions 149

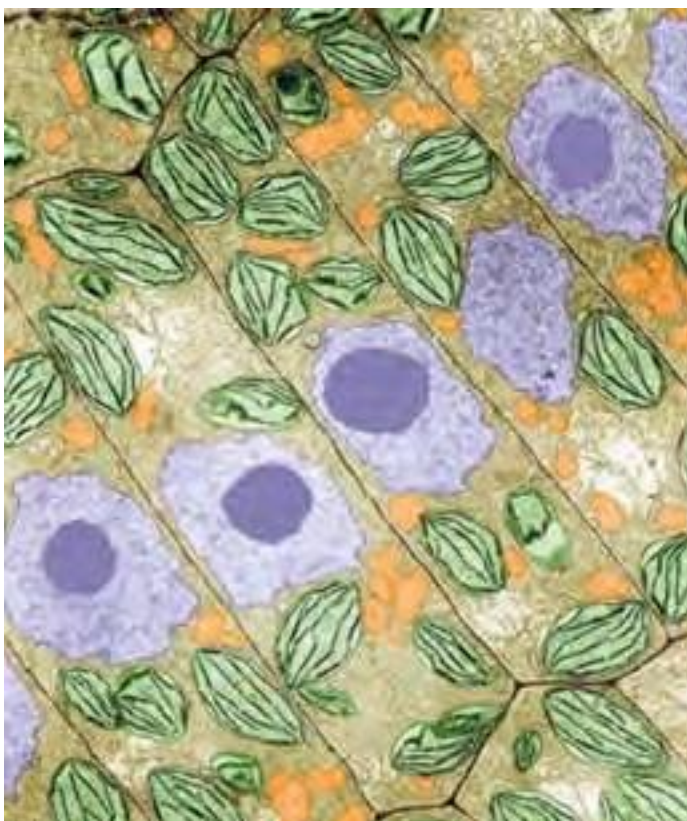

- The Structure and Hydrolysis of ATP 149
- How the Hydrolysis of ATP Performs Work 150
- The Regeneration of ATP 151

#### CONCEPT 8.4 Enzymes speed up metabolic reactions by lowering energy barriers 152

- The Activation Energy Barrier 152
- How Enzymes Lower the  $E_A$  Barrier 153
- Substrate Specificity of Enzymes 153
- Catalysis in the Enzyme's Active Site 154
- Effects of Local Conditions on Enzyme Activity 155
- The Evolution of Enzymes 157

#### CONCEPT 8.5 Regulation of enzyme activity helps control metabolism 158

- Allosteric Regulation of Enzymes 158
- Specific Localization of Enzymes Within the Cell 160

## 9 Cellular Respiration and Fermentation 163

### OVERVIEW Life Is Work 163

#### CONCEPT 9.1 Catabolic pathways yield energy by oxidizing organic fuels 164

- Catabolic Pathways and Production of ATP 164
- Redox Reactions: Oxidation and Reduction 164
- The Stages of Cellular Respiration: A Preview 167

#### CONCEPT 9.2 Glycolysis harvests chemical energy by oxidizing glucose to pyruvate 168

#### CONCEPT 9.3 After pyruvate is oxidized, the citric acid cycle completes the energy-yielding oxidation of organic molecules 170

- Oxidation of Pyruvate to Acetyl CoA 170
- The Citric Acid Cycle 170

#### CONCEPT 9.4 During oxidative phosphorylation, chemiosmosis couples electron transport to ATP synthesis 172

- The Pathway of Electron Transport 172
- Chemiosmosis: The Energy-Coupling Mechanism 173
- An Accounting of ATP Production by Cellular Respiration 174

#### CONCEPT 9.5 Fermentation and anaerobic respiration enable cells to produce ATP without the use of oxygen 177

- Types of Fermentation 177
- Comparing Fermentation with Anaerobic and Aerobic Respiration 178
- The Evolutionary Significance of Glycolysis 179

#### CONCEPT 9.6 Glycolysis and the citric acid cycle connect to many other metabolic pathways 179

- The Versatility of Catabolism 179
- Biosynthesis (Anabolic Pathways) 180
- Regulation of Cellular Respiration via Feedback Mechanisms 181

## 10 Photosynthesis 184

### OVERVIEW The Process That Feeds the Biosphere 184

#### CONCEPT 10.1 Photosynthesis converts light energy to the chemical energy of food 186

- Chloroplasts: The Sites of Photosynthesis in Plants 186
- Tracking Atoms Through Photosynthesis: *Scientific Inquiry* 187
- The Two Stages of Photosynthesis: A Preview 188

#### CONCEPT 10.2 The light reactions convert solar energy to the chemical energy of ATP and NADPH 189

- The Nature of Sunlight 189
- Photosynthetic Pigments: The Light Receptors 190
- Excitation of Chlorophyll by Light 192
- A Photosystem: A Reaction-Center Complex Associated with Light-Harvesting Complexes 192
- Linear Electron Flow 193
- Cyclic Electron Flow 195
- A Comparison of Chemiosmosis in Chloroplasts and Mitochondria 196

#### CONCEPT 10.3 The Calvin cycle uses the chemical energy of ATP and NADPH to reduce $\text{CO}_2$ to sugar 198

#### CONCEPT 10.4 Alternative mechanisms of carbon fixation have evolved in hot, arid climates 199

- Photorespiration: An Evolutionary Relic? 199
- $\text{C}_4$  Plants 200
- CAM Plants 201
- The Importance of Photosynthesis: A Review 203

11 Cell Communication 206

OVERVIEW Cellular Messaging 206

CONCEPT 11.1 External signals are converted to responses within the cell 206

- Evolution of Cell Signaling 206
- Local and Long-Distance Signaling 208
- The Three Stages of Cell Signaling: *A Preview* 209

CONCEPT 11.2 Reception: A signaling molecule binds to a receptor protein, causing it to change shape 210

- Receptors in the Plasma Membrane 210
- Intracellular Receptors 214

CONCEPT 11.3 Transduction: Cascades of molecular interactions relay signals from receptors to target molecules in the cell 214

- Signal Transduction Pathways 215
- Protein Phosphorylation and Dephosphorylation 215
- Small Molecules and Ions as Second Messengers 216

CONCEPT 11.4 Response: Cell signaling leads to regulation of transcription or cytoplasmic activities 219

- Nuclear and Cytoplasmic Responses 219
- Fine-Tuning of the Response 220

CONCEPT 11.5 Apoptosis integrates multiple cell-signaling pathways 223

- Apoptosis in the Soil Worm *Caenorhabditis elegans* 224
- Apoptotic Pathways and the Signals That Trigger Them 224

12 The Cell Cycle 228

OVERVIEW The Key Roles of Cell Division 228

CONCEPT 12.1 Most cell division results in genetically identical daughter cells 229

- Cellular Organization of the Genetic Material 229
- Distribution of Chromosomes During Eukaryotic Cell Division 229

CONCEPT 12.2 The mitotic phase alternates with interphase in the cell cycle 230

- Phases of the Cell Cycle 231
- The Mitotic Spindle: *A Closer Look* 231
- Cytokinesis: *A Closer Look* 234
- Binary Fission in Bacteria 236
- The Evolution of Mitosis 237

CONCEPT 12.3 The eukaryotic cell cycle is regulated by a molecular control system 238

- Evidence for Cytoplasmic Signals 238
- The Cell Cycle Control System 238
- Loss of Cell Cycle Controls in Cancer Cells 242

UNIT

3 Genetics 246

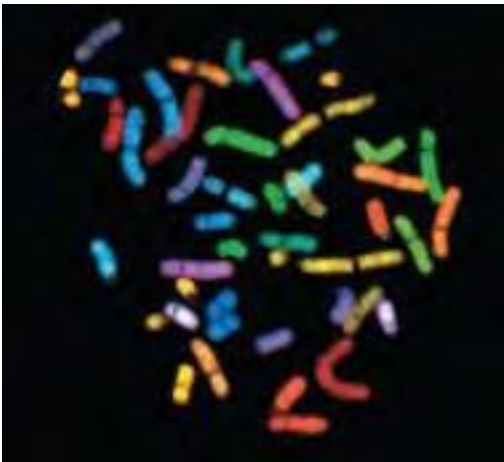

Interview: Joan A. Steitz

13 Meiosis and Sexual Life Cycles 248

OVERVIEW Variations on a Theme 248

CONCEPT 13.1 Offspring acquire genes from parents by inheriting chromosomes 248

- Inheritance of Genes 249
- Comparison of Asexual and Sexual Reproduction 249

CONCEPT 13.2 Fertilization and meiosis alternate in sexual life cycles 250

- Sets of Chromosomes in Human Cells 250
- Behavior of Chromosome Sets in the Human Life Cycle 251
- The Variety of Sexual Life Cycles 252

CONCEPT 13.3 Meiosis reduces the number of chromosome sets from diploid to haploid 253

- The Stages of Meiosis 253
- A Comparison of Mitosis and Meiosis 257

CONCEPT 13.4 Genetic variation produced in sexual life cycles contributes to evolution 257

- Origins of Genetic Variation Among Offspring 257
- The Evolutionary Significance of Genetic Variation Within Populations 259

14 Mendel and the Gene Idea 262

OVERVIEW Drawing from the Deck of Genes 262

CONCEPT 14.1 Mendel used the scientific approach to identify two laws of inheritance 262

- Mendel's Experimental, Quantitative Approach 262
- The Law of Segregation 264
- The Law of Independent Assortment 267

CONCEPT 14.2 The laws of probability govern Mendelian inheritance 269

- The Multiplication and Addition Rules Applied to Monohybrid Crosses 269
- Solving Complex Genetics Problems with the Rules of Probability 270

CONCEPT 14.3 Inheritance patterns are often more complex than predicted by simple Mendelian genetics 271

- Extending Mendelian Genetics for a Single Gene 271
- Extending Mendelian Genetics for Two or More Genes 273
- Nature and Nurture: The Environmental Impact on Phenotype 274
- Integrating a Mendelian View of Heredity and Variation 275

CONCEPT 14.4 Many human traits follow Mendelian patterns of inheritance 275

- Pedigree Analysis 275
- Recessively Inherited Disorders 276
- Dominantly Inherited Disorders 278
- Multifactorial Disorders 279
- Genetic Testing and Counseling 279

## 15 The Chromosomal Basis of Inheritance 286

**OVERVIEW W Locating Genes Along Chromosomes 286**

**CONCEPT 15.1 Mendelian inheritance has its physical basis in the behavior of chromosomes 286**

Morgan's Experimental Evidence: *Scientific Inquiry* 288

**CONCEPT 15.2 Sex-linked genes exhibit unique patterns of inheritance 289**

The Chromosomal Basis of Sex 289

Inheritance of X-Linked Genes 290

X Inactivation in Female Mammals 291

**CONCEPT 15.3 Linked genes tend to be inherited together because they are located near each other on the same chromosome 292**

How Linkage Affects Inheritance 292

Genetic Recombination and Linkage 294

Mapping the Distance Between Genes Using Recombination Data: *Scientific Inquiry* 296

**CONCEPT 15.4 Alterations of chromosome number or structure cause some genetic disorders 297**

Abnormal Chromosome Number 297

Alterations of Chromosome Structure 298

Human Disorders Due to Chromosomal Alterations 299

**CONCEPT 15.5 Some inheritance patterns are exceptions to standard Mendelian inheritance 300**

Genomic Imprinting 300

Inheritance of Organelle Genes 301

## 16 The Molecular Basis of Inheritance 305

**OVERVIEW W Life's Operating Instructions 305**

**CONCEPT 16.1 DNA is the genetic material 305**

The Search for the Genetic Material: *Scientific Inquiry* 305

Building a Structural Model of DNA: *Scientific Inquiry* 308

**CONCEPT 16.2 Many proteins work together in DNA replication and repair 311**

The Basic Principle: Base Pairing to a Template Strand 311

DNA Replication: *A Closer Look* 312

Proofreading and Repairing DNA 316

Evolutionary Significance of Altered DNA Nucleotides 318

Replicating the Ends of DNA Molecules 318

**CONCEPT 16.3 A chromosome consists of a DNA molecule packed together with proteins 320**

## 17 From Gene to Protein 325

**OVERVIEW W The Flow of Genetic Information 325**

**CONCEPT 17.1 Genes specify proteins via transcription and translation 325**

Evidence from the Study of Metabolic Defects 326

Basic Principles of Transcription and Translation 328

The Genetic Code 328

**CONCEPT 17.2 Transcription is the DNA-directed synthesis of RNA: *a closer look* 331**

Molecular Components of Transcription 331

Synthesis of an RNA Transcript 332

**CONCEPT 17.3 Eukaryotic cells modify RNA after transcription 334**

Alteration of mRNA Ends 334

Split Genes and RNA Splicing 334

xxxvi Detailed Contents

**CONCEPT 17.4 Translation is the RNA-directed synthesis of a polypeptide: *a closer look* 337**

Molecular Components of Translation 337

Building a Polypeptide 340

Completing and Targeting the Functional Protein 342

**CONCEPT 17.5 Mutations of one or a few nucleotides can affect protein structure and function 344**

Types of Small-Scale Mutations 344

Mutagens 346

**CONCEPT 17.6 While gene expression differs among the domains of life, the concept of a gene is universal 346**

Comparing Gene Expression in Bacteria, Archaea, and Eukarya 346

What Is a Gene? *Revisiting the Question* 347

## 18 Regulation of Gene Expression 351

**OVERVIEW W Conducting the Genetic Orchestra 351**

**CONCEPT 18.1 Bacteria often respond to environmental change by regulating transcription 351**

Operons: The Basic Concept 352

Repressible and Inducible Operons: Two Types of Negative Gene Regulation 353

Positive Gene Regulation 355

**CONCEPT 18.2 Eukaryotic gene expression is regulated at many stages 356**

Differential Gene Expression 356

Regulation of Chromatin Structure 357

Regulation of Transcription Initiation 358

Mechanisms of Post-Transcriptional Regulation 362

**CONCEPT 18.3 Noncoding RNAs play multiple roles in controlling gene expression 364**

Effects on mRNAs by MicroRNAs and Small Interfering RNAs 365

Chromatin Remodeling and Effects on Transcription by ncRNAs 366

The Evolutionary Significance of Small ncRNAs 366

**CONCEPT 18.4 A program of differential gene expression leads to the different cell types in a multicellular organism 366**

A Genetic Program for Embryonic Development 366

Cytoplasmic Determinants and Inductive Signals 367

Sequential Regulation of Gene Expression During Cellular Differentiation 367

Pattern Formation: Setting Up the Body Plan 369

**CONCEPT 18.5 Cancer results from genetic changes that affect cell cycle control 373**

Types of Genes Associated with Cancer 373

Interference with Normal Cell-Signaling Pathways 374

The Multistep Model of Cancer Development 376

Inherited Predisposition and Other Factors Contributing to Cancer 376

## 19 Viruses 381

**OVERVIEW W A Borrowed Life 381**

**CONCEPT 19.1 A virus consists of a nucleic acid surrounded by a protein coat 381**

The Discovery of Viruses: *Scientific Inquiry* 381

Structure of Viruses 382

CONCEPT 19.2 Viruses replicate only in host cells 384

- General Features of Viral Replicative Cycles 384
- Replicative Cycles of Phages 385
- Replicative Cycles of Animal Viruses 387
- Evolution of Viruses 390

CONCEPT 19.3 Viruses, viroids, and prions are formidable pathogens in animals and plants 390

- Viral Diseases in Animals 391
- Emerging Viruses 391
- Viral Diseases in Plants 393
- Viroids and Prions: The Simplest Infectious Agents 393

20 Biotechnology 396

OVERVIEW W The DNA Toolbox 396

CONCEPT 20.1 DNA cloning yields multiple copies of a gene or other DNA segment 396

- DNA Cloning and Its Applications: A Preview 397
- Using Restriction Enzymes to Make Recombinant DNA 398
- Cloning a Eukaryotic Gene in a Bacterial Plasmid 398
- Expressing Cloned Eukaryotic Genes 402
- Amplifying DNA *in Vitro*: The Polymerase Chain Reaction (PCR) 403

CONCEPT 20.2 DNA technology allows us to study the sequence, expression, and function of a gene 405

- Gel Electrophoresis and Southern Blotting 405
- DNA Sequencing 407
- Analyzing Gene Expression 409
- Determining Gene Function 410

CONCEPT 20.3 Cloning organisms may lead to production of stem cells for research and other applications 412

- Cloning Plants: Single-Cell Cultures 412
- Cloning Animals: Nuclear Transplantation 413
- Stem Cells of Animals 415

CONCEPT 20.4 The practical applications of DNA technology affect our lives in many ways 417

- Medical Applications 417
- Forensic Evidence and Genetic Profiles 420
- Environmental Cleanup 421
- Agricultural Applications 421
- Safety and Ethical Questions Raised by DNA Technology 422

21 Genomes and Their Evolution 426

OVERVIEW W Reading the Leaves from the Tree of Life 426

CONCEPT 21.1 New approaches have accelerated the pace of genome sequencing 427

- Three-Stage Approach to Genome Sequencing 427
- Whole-Genome Shotgun Approach to Genome Sequencing 428

CONCEPT 21.2 Scientists use bioinformatics to analyze genomes and their functions 429

- Centralized Resources for Analyzing Genome Sequences 429
- Identifying Protein-Coding Genes and Understanding Their Functions 429
- Understanding Genes and Gene Expression at the Systems Level 430

CONCEPT 21.3 Genomes vary in size, number of genes, and gene density 432

- Genome Size 432
- Number of Genes 433
- Gene Density and Noncoding DNA 434

CONCEPT 21.4 Multicellular eukaryotes have much noncoding DNA and many multigene families 434

- Transposable Elements and Related Sequences 434
- Other Repetitive DNA, Including Simple Sequence DNA 436
- Genes and Multigene Families 437

CONCEPT 21.5 Duplication, rearrangement, and mutation of DNA contribute to genome evolution 438

- Duplication of Entire Chromosome Sets 438
- Alterations of Chromosome Structure 438
- Duplication and Divergence of Gene-Sized Regions of DNA 439
- Rearrangements of Parts of Genes: Exon Duplication and Exon Shuffling 441
- How Transposable Elements Contribute to Genome Evolution 441

CONCEPT 21.6 Comparing genome sequences provides clues to evolution and development 442

- Comparing Genomes 442
- Comparing Developmental Processes 445

UNIT

4 Mechanisms of Evolution 450

Interview: Geerat J. Vermeij

22 Descent with Modification: A Darwinian View of Life 452

OVERVIEW W Endless Forms Most Beautiful 452

CONCEPT 22.1 The Darwinian revolution challenged traditional views of a young Earth inhabited by unchanging species 453

- Scala Naturae* and Classification of Species 453
- Ideas About Change over Time 454
- Lamarck’s Hypothesis of Evolution 454

CONCEPT 22.2 Descent with modification by natural selection explains the adaptations of organisms and the unity and diversity of life 455

- Darwin’s Research 455
- The Origin of Species* 457

CONCEPT 22.3 Evolution is supported by an overwhelming amount of scientific evidence 460

- Direct Observations of Evolutionary Change 460
- Homology 462
- The Fossil Record 465
- Biogeography 466
- What Is Theoretical About Darwin’s View of Life? 467

23 The Evolution of Populations 469

OVERVIEW

W

The Smallest Unit of Evolution 469

CONCEPT 23.1

Genetic variation makes evolution possible 469

Genetic Variation 470

Sources of Genetic Variation 471

CONCEPT 23.2

The Hardy-Weinberg equation can be used to test whether a population is evolving 473

Gene Pools and Allele Frequencies 473

The Hardy-Weinberg Principle 473

CONCEPT 23.3

Natural selection, genetic drift, and gene flow can alter allele frequencies in a population 476

Natural Selection 476

Genetic Drift 477

Gene Flow 479

CONCEPT 23.4

Natural selection is the only mechanism that consistently causes adaptive evolution 480

A Closer Look at Natural Selection 480

The Key Role of Natural Selection in Adaptive Evolution 482

Sexual Selection 482

The Preservation of Genetic Variation 483

Why Natural Selection Cannot Fashion Perfect Organisms 484

24 The Origin of Species 488

OVERVIEW

W

That “Mystery of Mysteries” 488

CONCEPT 24.1

The biological species concept emphasizes reproductive isolation 488

The Biological Species Concept 489

Other Definitions of Species 492

CONCEPT 24.2

Speciation can take place with or without geographic separation 493

Allopatric (“Other Country”) Speciation 493

Sympatric (“Same Country”) Speciation 495

Allopatric and Sympatric Speciation: A Review 497

CONCEPT 24.3

Hybrid zones reveal factors that cause reproductive isolation 498

Patterns Within Hybrid Zones 498

Hybrid Zones over Time 499

CONCEPT 24.4

Speciation can occur rapidly or slowly and can result from changes in few or many genes 501

The Time Course of Speciation 501

Studying the Genetics of Speciation 503

From Speciation to Macroevolution 504

25 The History of Life on Earth 507

OVERVIEW

W

Lost Worlds 507

CONCEPT 25.1

Conditions on early Earth made the origin of life possible 507

Synthesis of Organic Compounds on Early Earth 508

Abiotic Synthesis of Macromolecules 509

Protocells 509

Self-Replicating RNA and the Dawn of Natural Selection 509

CONCEPT 25.2

The fossil record documents the history of life 510

The Fossil Record 510

How Rocks and Fossils Are Dated 512

The Origin of New Groups of Organisms 512

CONCEPT 25.3

Key events in life’s history include the origins of single-celled and multicelled organisms and the colonization of land 514

The First Single-Celled Organisms 514

The Origin of Multicellularity 517

The Colonization of Land 518

CONCEPT 25.4

The rise and fall of groups of organisms reflect differences in speciation and extinction rates 519

Plate Tectonics 519

Mass Extinctions 521

Adaptive Radiations 524

CONCEPT 25.5

Major changes in body form can result from changes in the sequences and regulation of developmental genes 525

Effects of Developmental Genes 525

The Evolution of Development 526

CONCEPT 25.6

Evolution is not goal oriented 529

Evolutionary Novelties 529

Evolutionary Trends 530

UNIT

5

The Evolutionary History of Biological Diversity 534

Interview: W. Ford Doolittle

26 Phylogeny and the Tree of Life 536

OVERVIEW

W

Investigating the Tree of Life 536

CONCEPT 26.1

Phylogenies show evolutionary relationships 537

Binomial Nomenclature 537

Hierarchical Classification 537

Linking Classification and Phylogeny 538

What We Can and Cannot Learn from Phylogenetic Trees 539

Applying Phylogenies 539

CONCEPT 26.2

Phylogenies are inferred from morphological and molecular data 540

Morphological and Molecular Homologies 540

Sorting Homology from Analogy 540

Evaluating Molecular Homologies 541

CONCEPT 26.3

Shared characters are used to construct phylogenetic trees 542

Cladistics 542

Phylogenetic Trees with Proportional Branch Lengths 544

Maximum Parsimony and Maximum Likelihood 544

Phylogenetic Trees as Hypotheses 547

CONCEPT 26.4

An organism’s evolutionary history is documented in its genome 548

Gene Duplications and Gene Families 548

Genome Evolution 548

CONCEPT 26.5

Molecular clocks help track evolutionary time 549

Molecular Clocks 549

Applying a Molecular Clock: The Origin of HIV 550

CONCEPT 26.6

New information continues to revise our understanding of the tree of life 551

From Two Kingdoms to Three Domains 551

A Simple Tree of All Life 552

Is the Tree of Life Really a Ring? 553

27 Bacteria and Archaea 556

OVERVIEW Masters of Adaptation 556

CONCEPT 27.1 Structural and functional adaptations contribute to prokaryotic success 556

- Cell-Surface Structures 557
- Motility 558
- Internal Organization and DNA 559
- Reproduction and Adaptation 560

CONCEPT 27.2 Rapid reproduction, mutation, and genetic recombination promote genetic diversity in prokaryotes 561

- Rapid Reproduction and Mutation 561
- Genetic Recombination 561

CONCEPT 27.3 Diverse nutritional and metabolic adaptations have evolved in prokaryotes 564

- The Role of Oxygen in Metabolism 564
- Nitrogen Metabolism 564
- Metabolic Cooperation 565

CONCEPT 27.4 Molecular systematics is illuminating prokaryotic phylogeny 565

- Lessons from Molecular Systematics 566
- Archaea 566
- Bacteria 567

CONCEPT 27.5 Prokaryotes play crucial roles in the biosphere 570

- Chemical Recycling 570
- Ecological Interactions 570

CONCEPT 27.6 Prokaryotes have both beneficial and harmful impacts on humans 571

- Mutualistic Bacteria 571
- Pathogenic Bacteria 571
- Prokaryotes in Research and Technology 572

28 Protists 575

OVERVIEW Living Small 575

CONCEPT 28.1 Most eukaryotes are single-celled organisms 575

- Structural and Functional Diversity in Protists 576
- Endosymbiosis in Eukaryotic Evolution 576
- Five Supergroups of Eukaryotes 576

CONCEPT 28.2 Excavates include protists with modified mitochondria and protists with unique flagella 580

- Diplomonads and Parabasalids 580
- Euglenozoans 580

CONCEPT 28.3 Chromalveolates may have originated by secondary endosymbiosis 582

- Alveolates 582
- Stramenopiles 585

CONCEPT 28.4 Rhizarians are a diverse group of protists defined by DNA similarities 589

- Radiolarians 589
- Forams 589
- Cercozoans 590

CONCEPT 28.5 Red algae and green algae are the closest relatives of land plants 590

- Red Algae 590
- Green Algae 591

CONCEPT 28.6 Unikonts include protists that are closely related to fungi and animals 593

- Amoebozoans 593
- Opisthokonts 596

CONCEPT 28.7 Protists play key roles in ecological communities 596

- Symbiotic Protists 596
- Photosynthetic Protists 597

29 Plant Diversity I: How Plants Colonized Land 600

OVERVIEW The Greening of Earth 600

CONCEPT 29.1 Land plants evolved from green algae 600

- Morphological and Molecular Evidence 600
- Adaptations Enabling the Move to Land 601
- Derived Traits of Plants 601
- The Origin and Diversification of Plants 604

CONCEPT 29.2 Mosses and other nonvascular plants have life cycles dominated by gametophytes 606

- Bryophyte Gametophytes 606
- Bryophyte Sporophytes 609
- The Ecological and Economic Importance of Mosses 609

CONCEPT 29.3 Ferns and other seedless vascular plants were the first plants to grow tall 610

- Origins and Traits of Vascular Plants 610
- Classification of Seedless Vascular Plants 613
- The Significance of Seedless Vascular Plants 615

30 Plant Diversity II: The Evolution of Seed Plants 618

OVERVIEW Transforming the World 618

CONCEPT 30.1 Seeds and pollen grains are key adaptations for life on land 618

- Advantages of Reduced Gametophytes 618
- Heterospory: The Rule Among Seed Plants 619
- Ovules and Production of Eggs 619
- Pollen and Production of Sperm 620
- The Evolutionary Advantage of Seeds 620

CONCEPT 30.2 Gymnosperms bear “naked” seeds, typically on cones 621

- Gymnosperm Evolution 621
- The Life Cycle of a Pine: A Closer Look 625

CONCEPT 30.3 The reproductive adaptations of angiosperms include flowers and fruits 625

- Characteristics of Angiosperms 625
- Angiosperm Evolution 628
- Angiosperm Diversity 630
- Evolutionary Links Between Angiosperms and Animals 632

CONCEPT 30.4 Human welfare depends greatly on seed plants 632

- Products from Seed Plants 633
- Threats to Plant Diversity 633

31 Fungi 636

OVERVIEW Mighty Mushrooms 636

CONCEPT 31.1 Fungi are heterotrophs that feed by absorption 636

- Nutrition and Ecology 636
- Body Structure 637
- Specialized Hyphae in Mycorrhizal Fungi 638

**CONCEPT 31. 2 Fungi produce spores through sexual or asexual life cycles 638**

- Sexual Reproduction 639
- Asexual Reproduction 639

**CONCEPT 31. 3 The ancestor of fungi was an aquatic, single-celled, flagellated protist 640**

- The Origin of Fungi 640
- Are Microsporidia Fungi? 641
- The Move to Land 641

**CONCEPT 31. 4 Fungi have radiated into a diverse set of lineages 641**

- Chytrids 641
- Zygomycetes 643
- Glomeromycetes 644
- Ascomycetes 644
- Basidiomycetes 646

**CONCEPT 31. 5 Fungi play key roles in nutrient cycling, ecological interactions, and human welfare 648**

- Fungi as Decomposers 648
- Fungi as Mutualists 648
- Fungi as Pathogens 650
- Practical Uses of Fungi 651

## 32 An Overview of Animal Diversity 654

**OVERVIEW Welcome to Your Kingdom 654**

**CONCEPT 32. 1 Animals are multicellular, heterotrophic eukaryotes with tissues that develop from embryonic layers 654**

- Nutritional Mode 654
- Cell Structure and Specialization 654
- Reproduction and Development 655

**CONCEPT 32. 2 The history of animals spans more than half a billion years 656**

- Neoproterozoic Era (1 Billion–542 Million Years Ago) 656
- Paleozoic Era (542–251 Million Years Ago) 657
- Mesozoic Era (251–65.5 Million Years Ago) 658
- Cenozoic Era (65.5 Million Years Ago to the Present) 658

**CONCEPT 32. 3 Animals can be characterized by “body plans” 658**

- Symmetry 658
- Tissues 659
- Body Cavities 660
- Protostome and Deuterostome Development 660

**CONCEPT 32. 4 New views of animal phylogeny are emerging from molecular data 662**

- Points of Agreement 662
- Progress in Resolving Bilaterian Relationships 663
- Future Directions in Animal Systematics 664

## 33 An Introduction to Invertebrates 666

**OVERVIEW Life Without a Backbone 666**

**CONCEPT 33. 1 Sponges are basal animals that lack true tissues 670**

**CONCEPT 33. 2 Cnidarians are an ancient phylum of eumetazoans 671**

- Hydrozoans 672
- Scyphozoans 672
- Cubozoans 672
- Anthozoans 673

**CONCEPT 33. 3 Lophotrochozoans, a clade identified by molecular data, have the widest range of animal body forms 674**

- Flatworms 674

- Rotifers 676
- Lophophorates: Ectoprocts and Brachiopods 677
- Molluscs 677
- Annelids 681

**CONCEPT 33. 4 Ecdysozoans are the most species-rich animal group 683**

- Nematodes 683
- Arthropods 684

**CONCEPT 33. 5 Echinoderms and chordates are deuterostomes 692**

- Echinoderms 692
- Chordates 694

## 34 The Origin and Evolution of Vertebrates 697

**OVERVIEW Half a Billion Years of Backbones 697**

**CONCEPT 34. 1 Chordates have a notochord and a dorsal, hollow nerve cord 697**

- Derived Characters of Chordates 698
- Lancelets 699
- Tunicates 700
- Early Chordate Evolution 700

**CONCEPT 34. 2 Craniates are chordates that have a head 701**

- Derived Characters of Craniates 701
- The Origin of Craniates 702
- Hagfishes 702

**CONCEPT 34. 3 Vertebrates are craniates that have a backbone 703**

- Derived Characters of Vertebrates 703
- Lampreys 703
- Fossils of Early Vertebrates 703
- Origins of Bone and Teeth 704

**CONCEPT 34. 4 Gnathostomes are vertebrates that have jaws 704**

- Derived Characters of Gnathostomes 704
- Fossil Gnathostomes 705
- Chondrichthyans (Sharks, Rays, and Their Relatives) 705
- Ray-Finned Fishes and Lobe-Fins 707

**CONCEPT 34. 5 Tetrapods are gnathostomes that have limbs 709**

- Derived Characters of Tetrapods 709
- The Origin of Tetrapods 709
- Amphibians 710

**CONCEPT 34. 6 Amniotes are tetrapods that have a terrestrially adapted egg 713**

- Derived Characters of Amniotes 713
- Early Amniotes 714
- Reptiles 715

**CONCEPT 34. 7 Mammals are amniotes that have hair and produce milk 720**

- Derived Characters of Mammals 720
- Early Evolution of Mammals 721
- Monotremes 721
- Marsupials 722
- Eutherians (Placental Mammals) 723

**CONCEPT 34. 8 Humans are mammals that have a large brain and bipedal locomotion 728**

- Derived Characters of Humans 728
- The Earliest Hominins 728
- Australopiths 729
- Bipedalism 730
- Tool Use 730
- Early *Homo* 731
- Neanderthals 731
- Homo sapiens* 732

## UNIT

## 6

**Plant Form and Function 736**

Interview: Luis Herrera-Estrella

## 35

**Plant Structure, Growth, and Development 738****OVERVIEW W Are Plants Computers? 738****CONCEPT 35.1 Plants have a hierarchical organization consisting of organs, tissues, and cells 738**

The Three Basic Plant Organs: Roots, Stems, and Leaves 739  
 Dermal, Vascular, and Ground Tissues 742  
 Common Types of Plant Cells 743

**CONCEPT 35.2 Meristems generate cells for primary and secondary growth 746****CONCEPT 35.3 Primary growth lengthens roots and shoots 747**

Primary Growth of Roots 747  
 Primary Growth of Shoots 749

**CONCEPT 35.4 Secondary growth increases the diameter of stems and roots in woody plants 751**

The Vascular Cambium and Secondary Vascular Tissue 751  
 The Cork Cambium and the Production of Periderm 754  
 Evolution of Secondary Growth 754

**CONCEPT 35.5 Growth, morphogenesis, and cell differentiation produce the plant body 755**

Model Organisms: Revolutionizing the Study of Plants 755  
 Growth: Cell Division and Cell Expansion 756  
 Morphogenesis and Pattern Formation 758  
 Gene Expression and Control of Cell Differentiation 759  
 Shifts in Development: Phase Changes 759  
 Genetic Control of Flowering 760

## 36

**Resource Acquisition and Transport in Vascular Plants 764****OVERVIEW W Underground Plants 764****CONCEPT 36.1 Adaptations for acquiring resources were key steps in the evolution of vascular plants 764**

Shoot Architecture and Light Capture 765  
 Root Architecture and Acquisition of Water and Minerals 766

**CONCEPT 36.2 Different mechanisms transport substances over short or long distances 767**

The Apoplast and Symplast: Transport Continuums 767  
 Short-Distance Transport of Solutes Across Plasma Membranes 768  
 Short-Distance Transport of Water Across Plasma Membranes 768  
 Long-Distance Transport: The Role of Bulk Flow 771

**CONCEPT 36.3 Transpiration drives the transport of water and minerals from roots to shoots via the xylem 772**

Absorption of Water and Minerals by Root Cells 772  
 Transport of Water and Minerals into the Xylem 772  
 Bulk Flow Transport via the Xylem 772  
 Xylem Sap Ascent by Bulk Flow: A Review 776

**CONCEPT 36.4 The rate of transpiration is regulated by stomata 776**

Stomata: Major Pathways for Water Loss 776  
 Mechanisms of Stomatal Opening and Closing 777  
 Stimuli for Stomatal Opening and Closing 777  
 Effects of Transpiration on Wilting and Leaf Temperature 778

Adaptations That Reduce Evaporative Water Loss 778

**CONCEPT 36.5 Sugars are transported from sources to sinks via the phloem 779**

Movement from Sugar Sources to Sugar Sinks 779  
 Bulk Flow by Positive Pressure: The Mechanism of Translocation in Angiosperms 780

**CONCEPT 36.6 The symplast is highly dynamic 781**

Changes in Plasmodesmata 782  
 Phloem: An Information Superhighway 782  
 Electrical Signaling in the Phloem 782

## 37

**Soil and Plant Nutrition 785****OVERVIEW W A Horrifying Discovery 785****CONCEPT 37.1 Soil contains a living, complex ecosystem 785**

Soil Texture 786  
 Topsoil Composition 786  
 Soil Conservation and Sustainable Agriculture 787

**CONCEPT 37.2 Plants require essential elements to complete their life cycle 789**

Macronutrients and Micronutrients 790  
 Symptoms of Mineral Deficiency 790  
 Improving Plant Nutrition by Genetic Modification: Some Examples 792

**CONCEPT 37.3 Plant nutrition often involves relationships with other organisms 792**

Soil Bacteria and Plant Nutrition 793  
 Fungi and Plant Nutrition 795  
 Epiphytes, Parasitic Plants, and Carnivorous Plants 797

## 38

**Angiosperm Reproduction and Biotechnology 801****OVERVIEW W Flowers of Deceit 801****CONCEPT 38.1 Flowers, double fertilization, and fruits are unique features of the angiosperm life cycle 801**

Flower Structure and Function 802  
 Double Fertilization 806  
 Seed Development, Form, and Function 807  
 Fruit Form and Function 809

**CONCEPT 38.2 Flowering plants reproduce sexually, asexually, or both 812**

Mechanisms of Asexual Reproduction 812  
 Advantages and Disadvantages of Asexual Versus Sexual Reproduction 812  
 Mechanisms That Prevent Self-Fertilization 813  
 Vegetative Propagation and Agriculture 814

**CONCEPT 38.3 Humans modify crops by breeding and genetic engineering 815**

Plant Breeding 815  
 Plant Biotechnology and Genetic Engineering 816  
 The Debate over Plant Biotechnology 817

39 Plant Responses to Internal and External Signals 821

OVERVIEW **Stimuli and a Stationary Life 821**

CONCEPT 39.1 **Signal transduction pathways link signal reception to response 821**

Reception 822

Transduction 822

Response 823

CONCEPT 39.2 **Plant hormones help coordinate growth, development, and responses to stimuli 824**

The Discovery of Plant Hormones 825

A Survey of Plant Hormones 826

Systems Biology and Hormone Interactions 834

CONCEPT 39.3 **Responses to light are critical for plant success 835**

Blue-Light Photoreceptors 836

Phytochromes as Photoreceptors 836

Biological Clocks and Circadian Rhythms 838

The Effect of Light on the Biological Clock 838

Photoperiodism and Responses to Seasons 839

CONCEPT 39.4 **Plants respond to a wide variety of stimuli other than light 841**

Gravity 841

Mechanical Stimuli 842

Environmental Stresses 843

CONCEPT 39.5 **Plants respond to attacks by herbivores and pathogens 845**

Defenses Against Herbivores 845

Defenses Against Pathogens 846

UNIT

7 Animal Form and Function 850

Interview: Baldomero M. Olivera

40 Basic Principles of Animal Form and Function 852

OVERVIEW **Diverse Forms, Common Challenges 852**

CONCEPT 40.1 **Animal form and function are correlated at all levels of organization 852**

Evolution of Animal Size and Shape 853

Exchange with the Environment 853

Hierarchical Organization of Body Plans 855

Coordination and Control 859

CONCEPT 40.2 **Feedback control maintains the internal environment in many animals 860**

Regulating and Conforming 860

Homeostasis 860

CONCEPT 40.3 **Homeostatic processes for thermoregulation involve form, function, and behavior 862**

Endothermy and Ectothermy 863

Variation in Body Temperature 863

Balancing Heat Loss and Gain 864

Acclimatization in Thermoregulation 867

Physiological Thermostats and Fever 867

CONCEPT 40.4 **Energy requirements are related to animal size, activity, and environment 868**

Energy Allocation and Use 868

Quantifying Energy Use 869

Minimum Metabolic Rate and Thermoregulation 869

Influences on Metabolic Rate 870

Energy Budgets 871

Torpor and Energy Conservation 871

41 Animal Nutrition 875

OVERVIEW **The Need to Feed 875**

CONCEPT 41.1 **An animal's diet must supply chemical energy, organic molecules, and essential nutrients 875**

Essential Nutrients 876

Dietary Deficiencies 878

Assessing Nutritional Needs 879

CONCEPT 41.2 **The main stages of food processing are ingestion, digestion, absorption, and elimination 880**

Digestive Compartments 880

CONCEPT 41.3 **Organs specialized for sequential stages of food processing form the mammalian digestive system 883**

The Oral Cavity, Pharynx, and Esophagus 883

Digestion in the Stomach 885

Digestion in the Small Intestine 887

Absorption in the Small Intestine 887

Absorption in the Large Intestine 888

CONCEPT 41.4 **Evolutionary adaptations of vertebrate digestive systems correlate with diet 889**

Dental Adaptations 889

Stomach and Intestinal Adaptations 890

Mutualistic Adaptations 890

CONCEPT 41.5 **Feedback circuits regulate digestion, energy storage, and appetite 891**

Regulation of Digestion 891

Regulation of Energy Storage 892

Regulation of Appetite and Consumption 893

Obesity and Evolution 894

42 Circulation and Gas Exchange 897

OVERVIEW **Trading Places 897**

CONCEPT 42.1 **Circulatory systems link exchange surfaces with cells throughout the body 897**

Gastrovascular Cavities 898

Evolutionary Variation in Circulatory Systems 898

Organization of Vertebrate Circulatory Systems 899

CONCEPT 42.2 **Coordinated cycles of heart contraction drive double circulation in mammals 902**

Mammalian Circulation 902

The Mammalian Heart: A Closer Look 902

Maintaining the Heart's Rhythmic Beat 904

CONCEPT 42.3 **Patterns of blood pressure and flow reflect the structure and arrangement of blood vessels 905**

Blood Vessel Structure and Function 905

Blood Flow Velocity 905

Blood Pressure 906

Capillary Function 908

Fluid Return by the Lymphatic System 909

CONCEPT 42.4 **Blood components function in exchange, transport, and defense 910**

Blood Composition and Function 910

Cardiovascular Disease 913

**CONCEPT 42. 5 Gas exchange occurs across specialized respiratory surfaces 915**

Partial Pressure Gradients in Gas Exchange 915  
Respiratory Media 915  
Respiratory Surfaces 916  
Gills in Aquatic Animals 916  
Tracheal Systems in Insects 917  
Lungs 918

**CONCEPT 42. 6 Breathing ventilates the lungs 920**

How an Amphibian Breathes 920  
How a Bird Breathes 920  
How a Mammal Breathes 921  
Control of Breathing in Humans 922

**CONCEPT 42. 7 Adaptations for gas exchange include pigments that bind and transport gases 923**

Coordination of Circulation and Gas Exchange 923  
Respiratory Pigments 923  
Respiratory Adaptations of Diving Mammals 925

## 43 The Immune System 929

**OVERVIEW Recognition and Response 929**

**CONCEPT 43. 1 In innate immunity, recognition and response rely on traits common to groups of pathogens 930**

Innate Immunity of Invertebrates 930  
Innate Immunity of Vertebrates 932  
Evasion of Innate Immunity by Pathogens 934

**CONCEPT 43. 2 In adaptive immunity, receptors provide pathogen-specific recognition 935**

Antigen Recognition by B Cells and Antibodies 935  
Antigen Recognition by T Cells 936  
B Cell and T Cell Development 937

**CONCEPT 43. 3 Adaptive immunity defends against infection of body fluids and body cells 940**

Helper T Cells: A Response to Nearly All Antigens 940  
Cytotoxic T Cells: A Response to Infected Cells 941  
B Cells and Antibodies: A Response to Extracellular Pathogens 942  
Summary of the Humoral and Cell-Mediated Immune Responses 944  
Active and Passive Immunization 944  
Antibodies as Tools 945  
Immune Rejection 945

**CONCEPT 43. 4 Disruptions in immune system function can elicit or exacerbate disease 946**

Exaggerated, Self-Directed, and Diminished Immune Responses 946  
Evolutionary Adaptations of Pathogens That Underlie Immune System Avoidance 948  
Cancer and Immunity 950

## 44 Osmoregulation and Excretion 953

**OVERVIEW A Balancing Act 953**

**CONCEPT 44. 1 Osmoregulation balances the uptake and loss of water and solutes 953**

Osmosis and Osmolarity 953  
Osmotic Challenges 954  
Energetics of Osmoregulation 956  
Transport Epithelia in Osmoregulation 957

**CONCEPT 44. 2 An animal's nitrogenous wastes reflect its phylogeny and habitat 958**

Forms of Nitrogenous Waste 958  
The Influence of Evolution and Environment on Nitrogenous Wastes 959

**CONCEPT 44. 3 Diverse excretory systems are variations on a tubular theme 960**

Excretory Processes 960  
Survey of Excretory Systems 960

**CONCEPT 44. 4 The nephron is organized for stepwise processing of blood filtrate 963**

From Blood Filtrate to Urine: *A Closer Look* 964  
Solute Gradients and Water Conservation 965  
Adaptations of the Vertebrate Kidney to Diverse Environments 967

**CONCEPT 44. 5 Hormonal circuits link kidney function, water balance, and blood pressure 968**

Antidiuretic Hormone 969  
The Renin-Angiotensin-Aldosterone System 970  
Homeostatic Regulation of the Kidney 971

## 45 Hormones and the Endocrine System 974

**OVERVIEW The Body's Long-Distance Regulators 974**

**CONCEPT 45. 1 Hormones and other signaling molecules bind to target receptors, triggering specific response pathways 975**

Intercellular Communication 975  
Endocrine Tissues and Organs 976  
Chemical Classes of Hormones 976  
Cellular Response Pathways 977  
Multiple Effects of Hormones 978  
Signaling by Local Regulators 979  
Coordination of Neuroendocrine and Endocrine Signaling 980

**CONCEPT 45. 2 Feedback regulation and antagonistic hormone pairs are common in endocrine systems 981**

Simple Hormone Pathways 981  
Feedback Regulation 982  
Insulin and Glucagon: Control of Blood Glucose 982

**CONCEPT 45. 3 The hypothalamus and pituitary are central to endocrine regulation 984**

Coordination of Endocrine and Nervous Systems in Vertebrates 984  
Thyroid Regulation: A Hormone Cascade Pathway 987  
Evolution of Hormone Function 988  
Tropic and Nontropic Hormones 989

**CONCEPT 45. 4 Endocrine glands respond to diverse stimuli in regulating homeostasis, development, and behavior 989**

Parathyroid Hormone and Vitamin D: Control of Blood Calcium 989  
Adrenal Hormones: Response to Stress 990  
Gonadal Sex Hormones 992  
Melatonin and Biorhythms 993

46

Animal Reproduction 996

- OVERVIEW **Pairing Up for Sexual Reproduction 996**
- CONCEPT 46.1 **Both asexual and sexual reproduction occur in the animal kingdom 996**
- Mechanisms of Asexual Reproduction 996
- Sexual Reproduction: An Evolutionary Enigma 997
- Reproductive Cycles 998
- Variation in Patterns of Sexual Reproduction 998
- CONCEPT 46.2 **Fertilization depends on mechanisms that bring together sperm and eggs of the same species 999**
- Ensuring the Survival of Offspring 1000
- Gamete Production and Delivery 1000
- CONCEPT 46.3 **Reproductive organs produce and transport gametes 1002**
- Female Reproductive Anatomy 1002
- Male Reproductive Anatomy 1004
- Gametogenesis 1005
- CONCEPT 46.4 **The interplay of tropic and sex hormones regulates mammalian reproduction 1008**
- Hormonal Control of Female Reproductive Cycles 1008
- Hormonal Control of the Male Reproductive System 1010
- Human Sexual Response 1011
- CONCEPT 46.5 **In placental mammals, an embryo develops fully within the mother’s uterus 1011**
- Conception, Embryonic Development, and Birth 1012
- Maternal Immune Tolerance of the Embryo and Fetus 1015
- Contraception and Abortion 1015
- Modern Reproductive Technologies 1017

47

Animal Development 1021

- OVERVIEW **A Body-Building Plan 1021**
- CONCEPT 47.1 **Fertilization and cleavage initiate embryonic development 1022**
- Fertilization 1022
- Cleavage 1025
- CONCEPT 47.2 **Morphogenesis in animals involves specific changes in cell shape, position, and survival 1027**
- Gastrulation 1027
- Developmental Adaptations of Amniotes 1031
- Organogenesis 1031
- Mechanisms of Morphogenesis 1033

CONCEPT 47.3 **Cytoplasmic determinants and inductive signals contribute to cell fate specification 1035**

- Fate Mapping 1035
- Cell Fate Determination and Pattern Formation by Inductive Signals 1039

48

Neurons, Synapses, and Signaling 1045

- OVERVIEW **Lines of Communication 1045**
- CONCEPT 48.1 **Neuron organization and structure reflect function in information transfer 1045**
- Introduction to Information Processing 1046
- Neuron Structure and Function 1046
- CONCEPT 48.2 **Ion pumps and ion channels establish the resting potential of a neuron 1048**
- Formation of the Resting Potential 1048
- Modeling the Resting Potential 1049
- CONCEPT 48.3 **Action potentials are the signals conducted by axons 1050**
- Hyperpolarization and Depolarization 1050
- Graded Potentials and Action Potentials 1050
- Generation of Action Potentials: *A Closer Look* 1051
- Conduction of Action Potentials 1053
- CONCEPT 48.4 **Neurons communicate with other cells at synapses 1055**
- Generation of Postsynaptic Potentials 1056
- Summation of Postsynaptic Potentials 1056
- Modulated Signaling at Synapses 1057
- Neurotransmitters 1057

49

Nervous Systems 1062

- OVERVIEW **Command and Control Center 1062**
- CONCEPT 49.1 **Nervous systems consist of circuits of neurons and supporting cells 1062**
- Organization of the Vertebrate Nervous System 1063
- Glial Cells 1065
- The Peripheral Nervous System 1066
- CONCEPT 49.2 **The vertebrate brain is regionally specialized 1067**
- Arousal and Sleep 1067
- Biological Clock Regulation 1070
- Emotions 1071
- CONCEPT 49.3 **The cerebral cortex controls voluntary movement and cognitive functions 1072**
- Language and Speech 1072
- Lateralization of Cortical Function 1073
- Information Processing 1074
- Frontal Lobe Function 1075
- Evolution of Cognition in Vertebrates 1075
- CONCEPT 49.4 **Changes in synaptic connections underlie memory and learning 1076**
- Neural Plasticity 1076
- Memory and Learning 1077
- Long-Term Potentiation 1077
- Stem Cells in the Brain 1078
- CONCEPT 49.5 **Many nervous system disorders can be explained in molecular terms 1079**
- Schizophrenia 1079
- Depression 1080
- Drug Addiction and the Brain’s Reward System 1080
- Alzheimer’s Disease 1081
- Parkinson’s Disease 1081

50

Sensory and Motor Mechanisms 1085

- OVERVIEW W Sensing and Acting 1085
- CONCEPT 50.1 Sensory receptors transduce stimulus energy and transmit signals to the central nervous system 1085
- Sensory Pathways 1086
- Types of Sensory Receptors 1088
- CONCEPT 50.2 The mechanoreceptors responsible for hearing and equilibrium detect moving fluid or settling particles 1090
- Sensing of Gravity and Sound in Invertebrates 1090
- Hearing and Equilibrium in Mammals 1090
- Hearing and Equilibrium in Other Vertebrates 1094
- CONCEPT 50.3 Visual receptors in diverse animals depend on light-absorbing pigments 1095
- Evolution of Visual Perception 1095
- The Vertebrate Visual System 1097
- CONCEPT 50.4 The senses of taste and smell rely on similar sets of sensory receptors 1101
- Taste in Mammals 1101
- Smell in Humans 1102
- CONCEPT 50.5 The physical interaction of protein filaments is required for muscle function 1103
- Vertebrate Skeletal Muscle 1104
- Other Types of Muscle 1109
- CONCEPT 50.6 Skeletal systems transform muscle contraction into locomotion 1110
- Types of Skeletal Systems 1111
- Types of Locomotion 1113
- Energy Costs of Locomotion 1114

51

Animal Behavior 1118

- OVERVIEW W The How and Why of Animal Activity 1118
- CONCEPT 51.1 Discrete sensory inputs can stimulate both simple and complex behaviors 1118
- Fixed Action Patterns 1119
- Migration 1119
- Behavioral Rhythms 1120
- Animal Signals and Communication 1120
- CONCEPT 51.2 Learning establishes specific links between experience and behavior 1123
- Experience and Behavior 1123
- Learning 1123
- CONCEPT 51.3 Selection for individual survival and reproductive success can explain most behaviors 1128
- Foraging Behavior 1128
- Mating Behavior and Mate Choice 1129
- CONCEPT 51.4 Inclusive fitness can account for the evolution of behavior, including altruism 1134
- Genetic Basis of Behavior 1134
- Genetic Variation and the Evolution of Behavior 1135
- Altruism 1137
- Inclusive Fitness 1137
- Evolution and Human Culture 1139

UNIT

8

Ecology 1142

Interview: Camille Parmesan

52

An Introduction to Ecology and the Biosphere 1144

- OVERVIEW W Discovering Ecology 1144
- CONCEPT 52.1 Earth's climate varies by latitude and season and is changing rapidly 1144
- Global Climate Patterns 1147
- Regional and Local Effects on Climate 1147
- Microclimate 1149
- Global Climate Change 1149
- CONCEPT 52.2 The structure and distribution of terrestrial biomes are controlled by climate and disturbance 1150
- Climate and Terrestrial Biomes 1151
- General Features of Terrestrial Biomes 1151
- Disturbance and Terrestrial Biomes 1152
- CONCEPT 52.3 Aquatic biomes are diverse and dynamic systems that cover most of Earth 1157
- Zonation in Aquatic Biomes 1157
- CONCEPT 52.4 Interactions between organisms and the environment limit the distribution of species 1163
- Dispersal and Distribution 1164
- Behavior and Habitat Selection 1165
- Biotic Factors 1165
- Abiotic Factors 1166

53

Population Ecology 1170

- OVERVIEW W Counting Sheep 1170
- CONCEPT 53.1 Dynamic biological processes influence population density, dispersion, and demographics 1170
- Density and Dispersion 1171
- Demographics 1173
- CONCEPT 53.2 The exponential model describes population growth in an idealized, unlimited environment 1175
- Per Capita Rate of Increase 1175
- Exponential Growth 1176

CONCEPT 53.3 The logistic model describes how a population grows more slowly as it nears its carrying capacity 1177

- The Logistic Growth Model 1177
- The Logistic Model and Real Populations 1178

CONCEPT 53.4 Life history traits are products of natural selection 1179

- Evolution and Life History Diversity 1180
- “Trade-offs” and Life Histories 1180

CONCEPT 53.5 Many factors that regulate population growth are density dependent 1182

- Population Change and Population Density 1182
- Mechanisms of Density-Dependent Population Regulation 1182
- Population Dynamics 1184

CONCEPT 53.6 The human population is no longer growing exponentially but is still increasing rapidly 1187

- The Global Human Population 1187
- Global Carrying Capacity 1190

54 Community Ecology 1194

OVERVIEW Communities in Motion 1194

CONCEPT 54.1 Community interactions are classified by whether they help, harm, or have no effect on the species involved 1194

- Competition 1195
- Predation 1197
- Herbivory 1198
- Symbiosis 1198
- Facilitation 1200

CONCEPT 54.2 Diversity and trophic structure characterize biological communities 1200

- Species Diversity 1200
- Diversity and Community Stability 1201
- Trophic Structure 1202
- Species with a Large Impact 1204
- Bottom-Up and Top-Down Controls 1206

CONCEPT 54.3 Disturbance influences species diversity and composition 1207

- Characterizing Disturbance 1207
- Ecological Succession 1208
- Human Disturbance 1210

CONCEPT 54.4 Biogeographic factors affect community diversity 1211

- Latitudinal Gradients 1211
- Area Effects 1211
- Island Equilibrium Model 1212

CONCEPT 54.5 Pathogens alter community structure locally and globally 1213

- Pathogens and Community Structure 1214
- Community Ecology and Zoonotic Diseases 1214

55 Ecosystems and Restoration Ecology 1218

OVERVIEW Cool Ecosystem 1218

CONCEPT 55.1 Physical laws govern energy flow and chemical cycling in ecosystems 1219

- Conservation of Energy 1219
- Conservation of Mass 1219
- Energy, Mass, and Trophic Levels 1219

CONCEPT 55.2 Energy and other limiting factors control primary production in ecosystems 1220

- Ecosystem Energy Budgets 1221
- Primary Production in Aquatic Ecosystems 1223
- Primary Production in Terrestrial Ecosystems 1224

CONCEPT 55.3 Energy transfer between trophic levels is typically only 10% efficient 1225

- Production Efficiency 1225
- Trophic Efficiency and Ecological Pyramids 1225

CONCEPT 55.4 Biological and geochemical processes cycle nutrients and water in ecosystems 1227

- Biogeochemical Cycles 1227
- Decomposition and Nutrient Cycling Rates 1230
- Case Study: Nutrient Cycling in the Hubbard Brook Experimental Forest 1231

CONCEPT 55.5 Restoration ecologists help return degraded ecosystems to a more natural state 1232

- Bioremediation 1232
- Biological Augmentation 1233
- Restoration Projects Worldwide 1233

56 Conservation Biology and Global Change 1238

OVERVIEW Striking Gold 1238

CONCEPT 56.1 Human activities threaten Earth’s biodiversity 1239

- Three Levels of Biodiversity 1239
- Biodiversity and Human Welfare 1240
- Threats to Biodiversity 1241

CONCEPT 56.2 Population conservation focuses on population size, genetic diversity, and critical habitat 1244

- Small-Population Approach 1245
- Declining-Population Approach 1247
- Weighing Conflicting Demands 1249

CONCEPT 56.3 Landscape and regional conservation help sustain biodiversity 1249

- Landscape Structure and Biodiversity 1249
- Establishing Protected Areas 1251

CONCEPT 56.4 Earth is changing rapidly as a result of human actions 1254

- Nutrient Enrichment 1254
- Toxins in the Environment 1255
- Greenhouse Gases and Global Warming 1256
- Depletion of Atmospheric Ozone 1258

CONCEPT 56.5 Sustainable development can improve human lives while conserving biodiversity 1260

- Sustainable Biosphere Initiative 1260
- The Future of the Biosphere 1261

Appendix A Answers A–1

Appendix B Periodic Table of the Elements B–1

Appendix C The Metric System C–1

Appendix D A Comparison of the Light Microscope and the Electron Microscope D–1

Appendix E Classification of Life E–1
